

Personal Development Plan

Personal Development Plan (PDP)

Regarding: Personal development plan #....
Student name: Derjen Frick
Student number: 5588472
Course: Professional Skills
Phase: Year 2
Study coach: Lionel

1. What competences will I develop during this period?

Professional workmanship

Profession-specific competencies	What requires special attention?
a. Managing	• Distributing tasks evenly • Keep tracking of results for each member • Implementing the scum method
b. Analysing	• Analysing the needs of our clients • Identifying project problems • Breaking down complex things
c. Advising	• Ability to give feedback including positive suggestions
d. Designing	• Ability to create detailed and well structured design documents
e. Executing	• Following code conventions of NHL stenden and group conventions • Cleaning up code

Personal Development Plan (PDP)

Professionalisation

Study career competences	What requires special attention?
a. Ability to pursue one's own competence development independently	• Gaining motivation to follow through with goals all the way through and not just half way
b. Ability to take responsibility for one's own study progress	• Tendency to procrastinate till last minute • Keeping track of all deadlines
c. Ability to make the right study and career choices	• Research into all aspects of IT • Seek advice from professionals when needed
d. Ability to build up a supportive social network	• Going to fellow classmates and teachers for assistance if I am stuck

Professionalisation

Study competencies	What requires special attention?
a. To learn how to learn	• Discovering the right way to learn programming for me
b. Planning	• Sticking to my weekly plans • Breaking bigger tasks into smaller parts , basically a scrum method
c. Time management	• Doing tasks based on urgency and importance • Doing things last minute
d. Project-based working	• Better communication • More input in group discussions

Social and communicative competencies

Social and communicative competences	What requires special attention?
a. Ability to correct in an appropriate way	• The ability to give feedback • Giving tips and tops without a biased point of view
b. Interview techniques	• Preparing the correct and necessary questions • Sticking to initial script • Keeping track of the meeting with notes
c. Personal feedback	• Apply the feedback received from all peers • Not being offended or defensive when receiving feedback
d. Presentation skills	• Maintaining eye contact • Keeping still when presenting • Memorising the script much better • Summarising each part in a presentation
e. Reporting in writing	• Follow ADA 7 referencing structure • Better flow between paragraphs • Maintaining structure
f. Techniques in meeting	• Preparing and following the agenda • Time management
g. Writing a formal or business letter	• Writing in the correct tone • Maintaining structure • Use relative jargon in letteres

Personal Development Plan (PDP)

2. What are my personal development goals?

Action plan: which activities will I undertake to realise my developmental goals?

Development goal (SMART)	Activity (SMART)	Measurable result (SMART)	Time completed
1. Deploy a production ready full-stack web application, so that I have the knowledge and skills in developing at a production level.	- Work on this project atleast 4 hours a week - Implement core features(Crud, error, basic UI) - Set up CI/CD pipeline - Docker container	- Live deployed Application. - CI Pipeline running on GitHub - Working docker container	11-01-2026
2. Create an AI-chat bot and intergrate it into the web application I am building from goal 1, so that I can broaden my experience	- Research - Spend 2 hours a week learning AI integration - Create backend for API endpoints - Build a chatbot frontend ui - Learn pyhton	Chatbot working and visible on the website and can answer basic questions, such as the wheres and hows, and order problem solving	11-01-2026
3. Learn basic swift so that I can build a basic iOS application	- Follow swift learning tutorials atleast 2 hours a week - Build a basic swift ui app - Implement swift basics such as navigation, buttons, and state management	A fully working swift ui app, with atleast 3 screens for navigation Screenshots or atleast a demo during presentation	11-01-2026

Personal Development Plan (PDP)

Personal Development Plan (PDP)

Goal number 1			
Old behaviour		New behaviour	
+	-	+	-
I build a lot of projects	Never deploy these projects	I deploy a complete working web-application for portfolio	Less experimenting and focusing more on honing production coding skills
I experiment a lot with technologies	Projects are not production level	I use CI/CD and proper environments	More focus on one project

What/who can help me achieve my goal?

I think certain lecturerers will be able to help me , especially the one teaching me how to use CI/CD pipelines, and making use of AI tools, such as ChatGpt and github Copilot for extra debugging

Personal Development Plan (PDP)

Goal number 2			
Old behaviour		New behaviour	
+	-	+	-
I Understand how API works	My applications have self problem solving for the imaginary users.	I can integrate and build an Ai	Need to spend a lot of time configuring and testing different prompts and responses
I can build applications	I cannot build and integrate an AI into these applications	I understand API and prompts	Complex backend logic

What/who can help me achieve my goal?

API documentation, Youtube and of course ChatGpt

Personal Development Plan (PDP)

Goal number 3			
Old behaviour		New behaviour	
+	-	+	-
Strong experience with web development	NO experience in ios development	Basic understanding of Swift ui and its structure	I need to invest more time in understanding different types of errors
Comfortable building fullstack website	No knowledge of extra front end languages such as Swift	Able to build a basic ios mobile application	I need to memorise more technologies

What/who can help me achieve my goal?

Apple swift documentation, online swift tutorials, and of course my best friend chatGpt
