360 DEGREE FEEDBACK FORM

FROM: Arad Kashef Haghighi

TO: Derjan Frick

ME

How would you describe me?

You are friendly, smart, and passionate about IT

What do you see as my strength(s)?

You work hard and you are good at coding

Can you describe a situation when I demonstrated this strength?

You deliver your tasks on time and with good quality

ME IN A TEAM

How do you see my role in this team?

You are a versatile developer who can work on any technical part

What is my contribution to this team?

You've worked on several difficult features as a developer

What would you ask me to help you with?

If I needed help with solving a coding problem in a project or advice about technical stuff

TIPS

Do you see any room for improvement for me as a team member?

Maybe you can work on communicating your opinions in a less confronting way, however this is just from my perspective since I'm a very nonconfrontational person.

Do you see any room for improvement for me as a future IT specialist?

Continue working on personal IT projects to boost your portfolio

What competences would you recommend me to work on?

Can't really think of much else

FROM: Ai Nguyen

TO: Derjan Frick

ME

How would you describe me?

Your answer:

You are smart, creative and helpful. You are also honest and straightforward with your opinion. You gave constructive advice when needed which is valuable

What do you see as my strength(s)?

360 DEGREE FEEDBACK FORM

Your answer:

Straightforward and outspoken, Confident in expressing your views

Can you describe a situation when I demonstrated this strength?

Your answer:

You addressed the problem when it occurred in the team or in code quality

ME IN A TEAM

How do you see my role in this team?

Your answer:

Plant, generate ideas

What is my contribution to this team?

Your answer:

You built Android Automotive and worked with the notification logic

What would you ask me to help you with?

Your answer:

Coding advice since you have certain experience

TIPS

Do you see any room for improvement for me as a team member?

Your answer:

Probably communication skill

Do you see any room for improvement for me as a future ITspecialist?

Your answer:

You can always improve but in general, nothing specifically

What competences would you recommend me to work on?

Your answer:

Communication skill

360 DEGREE FEEDBACK FORM

FROM: Sara Kiani Nejad

TO: Derjen Frick

ME

How would you describe me?

A good programmer and somebody who likes to work alone

What do you see as my strength(s)?

You are good at backend and setting up the base of a project to start coding.

Can you describe a situation when I demonstrated this strength?

During the last project, you set up the docker and GitHub environment.

ME IN A TEAM

How do you see my role in this team?

A backend developer

What is my contribution to this team?

Mostly you've done your tasks and asked if anybody needs support, however, was limited. Also, you gave an idea for expanding the project a bit for having more features.

What would you ask me to help you with?

I would get help regarding backend.

TIPS

Do you see any room for improvement for me as a team member?

One area for improvement could be communication. Sometimes your messages or reactions can come across as harsh, especially when there is uncertainty about a situation. It may help to ask questions and gather the necessary information before making assumptions.

For example, during the misunderstanding about scheduling team meetings, the situation could have been handled more calmly. Clarifying the issue and simply asking that meeting times be agreed upon by the whole team would have addressed the concern in a more respectful and constructive way.

Do you see any room for improvement for me as a future ITspecialist?

Just keep learning and practicing coding and gain more knowledge about new technologies.

What competences would you recommend me to work on?

Communication and team working skills

FROM: Ana-Maria Olaru

TO: Derjen Frick

360 DEGREE FEEDBACK FORM

ABOUT Derjen

How would I describe Derjen as a team?

Hardworking as he contributes through brainstorming, coming up with good useful ideas.

What do I see as Derjen's strength(s)?

Dedicated, creative and problem-solving skills.

Can I describe a situation when Derjen demonstrated this strength well?

Proves his dedication when he tackles an extension of the app per say. Where he was able to make it work despite the difficulties of testing it.

US AS A TEAM

How well did the team meets his expectations throughout the project/process?

Confusing but understandable as the project lacks tasks but enough information to work with.

Is there anything the team could have done differently to make his experience smoother or more efficient?

If we had the physical product and a car as those were the hardest things to test digitally.

What aspects of our work or collaboration did we find most valuable or impactful?

Contributing to the app on different pages.

GROWTH AND DEVELOPMENT

Do you see any room for improvement for his as a team member?

To participate more in person and ask help even if he enjoys working alone.

Do you see any room for improvement for his as a future ITspecialist?

Don't rely on Ai too much, the prices become more and more expensive. At some point it will be a luxury to have it. Try developing knowledge on how to build one or host one locally on a server so you can use it more efficiently and less token costly.

What competences would you recommend him to work on?

Boldness, just be more straightforward.

FROM: Yohan

TO: Derjen

ME

How would you describe me?

A truly competent researcher and developer who only happens to be a bit pessimistic.

What do you see as my strength(s)?

You are capable of and willing to perform the more complicated tasks and challenges. You frequently point out issues and voice your own opinion often and with conviction.

Can you describe a situation when I demonstrated this strength?

360 DEGREE FEEDBACK FORM

The tasks you performed are some of the most research heavy (car play) and tasks which are critical to the application's functioning (notifications). You were one of the first to point out the issue with the hours around halfway through the project.

ME IN A TEAM

How do you see my role in this team?

A programmer who is able to deliver the implementation of complicated features progressively.

What is my contribution to this team?

Implementation and constant improvement of the notification and carplay features.
Implementation of the car entry and exit logic.

What would you ask me to help you with?

I would probably ask for help if I wanted to get started on a new aspect or feature of the app as Derjen seems adept at implementing simple solutions for complex problems.

TIPS

Do you see any room for improvement for me as a team member?

I respect that you blew the whistle on the lack of hours situation fairly quickly. But I think you very well could have exemplified the point further through more concrete methods. For example by listing out the tasks and counting up the hours present for each person (this is something which I did later on, which only *then* warranted a bigger worry from some team members). Pointing out some issues with the remaining tasks also could have exemplified this.

Do you see any room for improvement for me as a future ITspecialist?

You make simple solutions for complex problems. I think this is admirable, but I personally often disagree with keeping it simple. The entire notification system is built by modifying other files and having a single newly created helper class. A notification class which can only send an

alert for a specific function. The code is not reusable and relies on heavy modification of other classes. The functional code is appended to a new function in ScanParser for example, though sending notifications isn't exactly the responsibility of that class. I think you could improve in architectural planning and OOP.

What competences would you recommend me to work on?

Effective communication in ways which exemplify your ideas, possibly using supporting material.
Design in the way that your code could be built in a more architecturally oriented manner.
